Sustainability & Carbon Reduction

Eternity Care Ltd | Caring for people, communities and our planet.

Our commitment

Eternity Care Ltd aims to achieve net zero greenhouse gas emissions by 2050 while delivering safe, compassionate, person-centred care.

Smarter staff travel

Our carers use their own cars for client visits. We aim to reduce avoidable mileage through efficient rota planning, local recruitment and appropriate remote meetings, without affecting timely care.

Responsible office energy

We rent office premises and pay electricity and heating bills. We will measure consumption and work to reduce unnecessary energy use.

Digital care and administration

We use Care 20:20 and aim to reduce paper through digital care records, training, recruitment and communications.

Purchasing and waste

We seek to reduce waste, recycle where appropriate and make responsible purchasing choices, always prioritising infection prevention and clinical safety.

Measuring progress

We are collecting data to establish a 2026 emissions baseline. We will publish our measured emissions and review our plan annually after verification and management approval.

Governance

Our directors and Registered Manager will oversee environmental improvements. Our full Carbon Reduction Plan will be made available here following completion and approval.
